## BROWNING REPTILES

## Crested Gecko

### Crested Gecko FUN FACTS;

- They come from New Caledonia which is a group of islands off the coast of Australia.
- They were thought to be extinct until their rediscovery in 1994 by Scientists.
- No two are alike. They have very distinct colours and patterns that make each one unique.
- They do not have eyelids. They use their tongues to lick their eyes.
- There are over 1850 species of geckos world wide with new variations still being discovered!
